

## MathExcel Supplemental Worksheet B: Functions, average velocities, and limits

- Find an expression for a function whose graph consists of a line segment joining the point  $(-2, 2)$  to  $(-1, 0)$  together with the top half of the unit circle with center at the origin.
- Rebecca sets out on a journey. For the first half of the distance, she drives leisurely at 30 miles/ hour and for the second half of the distance, she drives at 60 miles/hour. What is her average speed?
- Consider an object moving with a position given by the function  $f(t) = t^2$  and the point  $P(1, 1)$  on the graph of  $f(t)$ .
  - Compute the average velocity of the object between  $P$  and each point  $Q_i$  for  $i$  from 1 to 9:  
 $Q_1 = (2, f(2)), Q_2 = (1.5, f(1.5)), Q_3 = (1.1, f(1.1)), Q_4 = (1.01, f(1.01)),$   
 $Q_5 = (1.001, f(1.001)), Q_6 = (0, f(0)), Q_7 = (0.9, f(0.9)), Q_8 = (0.99, f(0.99)),$   
 $Q_9 = (0.999, f(0.999))$
  - Using the above data, estimate the instantaneous velocity of the object at time  $t = 1$ .
- Decide whether the following statements are true always/sometimes/never. Justify your answer in each case.
  - As  $x$  approaches 100, the function  $f(x) = \frac{1}{x}$  gets closer and closer to 0, so the limit as  $x$  goes to 100 of  $f(x)$  is 0.
  - $\lim_{x \rightarrow a} f(x) = L$  means that if  $x_1$  is closer to  $a$  than  $x_2$ , then  $f(x_1)$  will be closer to  $L$  than  $f(x_2)$  is.
  - Whether or not  $\lim_{x \rightarrow a} f(x) = L$  exists, depends on how  $f(a)$  is defined.
  - If  $f(x) = \frac{x^2 - 4}{x - 2}$  and  $g(x) = x + 2$ , then we can say that  $f$  and  $g$  are equal.
  - You are trying to guess  $\lim_{x \rightarrow 0} f(x)$ . You plug in  $x = 0.1, 0.01, 0.001, \dots$  and get  $f(x) = 0$  at all those values. In fact, you are told that for all  $n = 1, 2, \dots$ ,  $f(\frac{1}{10^n}) = 0$ . Then, we can conclude that  $\lim_{x \rightarrow 0} f(x) = 0$

5. Consider the following function

$$f(x) = \begin{cases} x^2 & x \text{ is rational, } x \neq 0 \\ -x^2 & x \text{ is irrational} \\ \text{undefined} & x = 0. \end{cases} \quad (1)$$

Determine which of the following statements is true.

- (a) There is no  $a$  for which  $\lim_{x \rightarrow a} f(x)$  exists.
  - (b) There may be some  $a$  for which  $\lim_{x \rightarrow a} f(x)$  exists, but it is impossible to say without more information.
  - (c)  $\lim_{x \rightarrow a} f(x)$  exists only if  $a = 0$ .
  - (d)  $\lim_{x \rightarrow a} f(x)$  exists for infinitely many  $a$ .
6. Sketch the graph of an example of a function  $f$  that satisfies the given conditions.
- (a)  $\lim_{x \rightarrow 2^-} f(x) = 1$ ,  $\lim_{x \rightarrow 1^+} f(x) = 1$ ,  $f(0) = 1$
  - (b)  $\lim_{x \rightarrow 0} f(x) = 1$ ,  $\lim_{x \rightarrow 1^-} f(x) = 0$ ,  $\lim_{x \rightarrow 1^+} f(x) = -1$ ,  $f(1) = 1$
  - (c)  $\lim_{x \rightarrow 3^-} f(x) = \infty$ ,  $\lim_{x \rightarrow 3^+} f(x) = -\infty$ ,  $\lim_{x \rightarrow 2} f(x) = \infty$ ,  $\lim_{x \rightarrow 4} f(x) = -\infty$
7. Carefully use the limit laws and the fact that  $\lim_{x \rightarrow c} x^n = c^n$  to evaluate the following limits. Show all your work.

(a)  $\lim_{t \rightarrow 4} \frac{3t - 14}{t + 1}$

(b)  $\lim_{z \rightarrow 9} \frac{\sqrt{z}}{z - 2}$

(c)  $\lim_{y \rightarrow \frac{1}{3}} (18y^2 - 4)^4$

(d)  $\lim_{t \rightarrow 0} \frac{t^2 + 1}{(t^3 + 2)(t^4 + 1)}$

8. (Review) A cone shaped drinking cup is made from a circular piece of paper of radius  $R$  by cutting out a sector and joining the edges  $CA$  and  $CB$ . Let  $r$  and  $h$  denote the base radius and height of the conical cup, respectively. Express the volume of the conical cup as function of  $h$  and  $R$ .

(Hint: For a right circular cone with base radius  $r$ , height  $h$  and slant height  $l$ ,  $l^2 = (r)^2 + (h)^2$ )

9. (Review) The half life of Palladium-100 ( $^{100}\text{Pd}$ ) is 4 days. Suppose you start with an initial sample of 1 gram, then
- Find the mass of  $^{100}\text{Pd}$  that is left after 16 days.
  - Let  $m(t)$  denote the mass of  $^{100}\text{Pd}$  left at  $t$  days. Express  $m(t)$  as a function of  $t$ .
  - Find the inverse of  $m(t)$  and explain its meaning.
  - When will the mass of  $^{100}\text{Pd}$  be reduced to 0.01 grams?
10. (Review) Consider the function  $f_0(x) = \frac{x}{x+1}$
- Compute the following compositions
    - $f_1(x) = f_0 \circ f_0$
    - $f_2(x) = f_0 \circ f_1$
    - $f_3(x) = f_0 \circ f_2$
  - Do you notice a pattern? Can you guess the expression for the function  $f_n(x)$  for any  $n \geq 0$ ?
  - Graph  $f_0(x)$ ,  $f_1(x)$ ,  $f_2(x)$  and  $f_3(x)$  on the same screen and describe the effects of repeated composition.
